

Would You Pay \$49 Per Year, Per Room for the Priceless Peace of Mind in a Life or Death Emergency?

Of Course You Would!

Campuses across the country are moving toward a mandatory opt-in strategy for their EAS systems, fully aware that today's cellular based systems cannot deliver emergency alerts simultaneously to every person on a campus.

This Acceptable Failure Rate of SMS Delivery Is SIMPLY UNACCEPTABLE

Unlike cellular based systems that can fail or become overloaded during an emergency, RAVENAlert™ from American Messaging uses the same advanced wireless network protocol that is counted on to work every time by first responder emergency teams – such as hospitals and fire departments – where everyone must receive mission-critical messages simultaneously within seconds of being sent during a life and death situation.

When plugged into a wall socket in any classroom or public space on campus, the RAVENAlert™ Flash Drive is the most unobtrusive and economical broadcast technology available to alert students, faculty, staff and visitors in the event of an emergency.

When an actual emergency occurs on your campus, you can count on RAVENAlert™ to alert your entire campus community, simultaneously in less than 20 seconds.
